ICRERA2026 — Paper ID 188

Variable-Frequency PI Output-Current Control of a Secondary Resonant Single Active Bridge Converter: Comparison with Zero-Voltage-Period Control

MOHAMED ABDELRAZEK received his bachelor. degree in Electrical Power and Automated Control Engineering from the Arab Academy for Science and Technology (AAST), Alexandria, Egypt, in 2017, and his M.B.A. degree from the Egypt-Japan University for Science and Technology (E-JUST), Egypt, in 2023. He is currently pursuing the Masters. degree in electrical engineering at the Nagoya Institute of Technology (NITech), Nagoya, Japan, with an expected completion in 2027.

From 2019 to 2024, he was a Lab Engineer with E-JUST, where he managed the operation of a 560 kW solar power station, operated OPAL-RT real-time simulators, and supported faculty and graduate students on research projects in robotics, energy harvesting, and electric vehicles. He previously worked as a Production Engineer with Ecobat Egypt from 2018 to 2019. Since 2013, he has also worked as a freelance technical consultant and PCB designer.

His current research interests include power electronics, DC-DC converter control, and electric vehicle fast-charging systems.
